

hypernova

dusk archive

At the end of 2006 we released our eighth album Dusk, having worked on it for a little over three years. It was released during a key period. Web streaming was becoming more popular, and MySpace was at its peak. Releasing an album in this environment was a bit of an adventure for us, but to our surprise it was well received.

The first single Consequences got a lot of attention, and led to our appearance on a compilation named Electraparade later in 2007. The last single The End – in reality more of an EP of left-over tracks – also caught the attention of listeners.

Thanks to this, we put together our first iTunes release, a cut-down selection of album highlights which we called the iDusk EP. At the time of writing, this remains our most successful single to date.

Dusk Archive contains all the tracks from those singles, and while the quality does vary, we hope you will enjoy this collection as much as we enjoyed compiling it.

hypernova

consequences
